OVERVIEW

Concept

Once a year SafariSky runs a true expedition circuit — multi-week, off-grid, remote builds where the airframe lives on a road-capable trailer between sites. GyroMotion's Cape-to-Czech expedition heritage is the only proof point we trust for this kind of routing.

SCOPE

What we want from GyroMotion

- Trailer + ground support module spec'd for the Cavalon airframe.
- Expedition-grade comms, recovery and field maintenance kit.
- One annual co-branded SafariSky x GyroMotion expedition circuit (Skeleton Coast, Richtersveld, or Northern Mozambique).
- Content collaboration: joint film of the inaugural expedition.

VALUE

What GyroMotion gets

- Annual showcase route on safarisky.africa.
- Visibility to EU members who buy expedition equipment for personal use.
- Joint content rights on every co-branded expedition.
- First right of refusal on member road-mobility purchases.
